Lightcast recessed luminaires

Modernisations with efficient LED technology

Lightcast recessed luminaires

Simple modernisation for better energy efficiency

Quick replacement of conventional light sources thanks to Lightcast with LED

Lightcast with LED allows the modernisation of Lightcast lighting systems using conventional light sources such as halogen lamps, high pressure discharge lamps or compact fluorescent lamps. Your advantages:

- Identical light distributions
- Identical installation dimensions
- Reuse of installation details
- Optimised lighting technology
- High visual comfort
- Reduction of operating costs

We will be happy to assist you with any questions you may have about replacements.

Existing Lightcast model	New Lightcast version with LED
	
 QT12 100W 2200lm 22lm/W 4000hrs	 LED to 32W 4400lm Up to 138lm/W Lumen maintenance L90/B10 to 50000hrs
 HIT-CE 35W 3900lm 111lm/W 15000hrs	
 TC-TEL 32W 2400lm 75lm/W 13000hrs	

Identical light distributions

Because new Lightcast LED luminaires have the same light distribution as the previous luminaires with conventional lamps, no new lighting design is needed. This means you can replace the luminaires directly without having to change the lighting concept.

Downlights with 60° and 90° light distribution

Lightcast recessed luminaires with 60° are particularly suitable for high rooms because their narrow light beam provides a high level of visual comfort. The version with 90° distribution is ideal for high cylindrical illuminance levels in conference rooms.

Mounting enclosure can be re-used

Thanks to identical outer dimensions of the Lightcast LED construction, the mounting rings and mounting enclosure can be reused for easy installing of the recessed luminaires. This minimises time and costs during upgrading.

Saving energy via LED

With the new LED version of Lightcast, significant energy savings can be achieved compared to existing systems fitted with halogen lamps. Lightcast enables energy consumption to be reduced by up to 80%. The long service life of LEDs also significantly cuts maintenance costs.

Optimised lighting technology

Thanks to Lightcast's new LED technology, the luminaires achieve a higher light output ratio. A lower luminous flux compared to the original recessed luminaires with conventional lamps is therefore sufficient to achieve the same illuminance.

Maintaining high visual comfort

Lightcast luminaires with conventional lamps impressed with high visual comfort. With a cut-off angle of 40°, the new LED technology also offers the same visual comfort.

System overview

Construction size
LED-data (max.)

108mm	170mm	226mm
12W/1650lm	24W/3300lm	32W/4400lm

Construction size

~60°	Ø	12W	24W	32W
2m	2.3m	339lx	678lx	904lx
4m	4.5m	84lx	169lx	225lx
6m	6.8m	38lx	76lx	101lx
8m	9.1m	21lx	42lx	56lx

60° light distribution

60° distribution is suitable for high rooms with high visual comfort requirements.

~90°	Ø	12W	24W	32W
2m	4.1m	120lx	241lx	321lx
4m	8.2m	30lx	60lx	80lx
6m	12m	13lx	26lx	35lx
8m	16m	8lx	16lx	21lx

90° light distribution

In meeting rooms, the extra wide flood distribution achieves a good recognition of faces.

The information on illuminance indicates the approximate illuminance. Computer-aided calculation is recommended for individual lighting design.
